

Client case study

From a \$10K launch month to \$101K a month in twelve months

How we launched and scaled a commercial aluminum foil brand on Amazon US to six-figure months while holding advertising at a 10.5% ACoS.

Marketplace Amazon US **Category** Kitchen & Dining, foodservice consumables **Period** August 2025 to September 2026

Prepared by Ecommerce Business Solutions, 18 September 2026

Client identity, brand names, ASINs, SKUs and campaign names are withheld under our confidentiality terms. Every figure is taken from Seller Central and Amazon Ads exports dated 14 September 2026.

The result on one page

A US seller came to us in mid-2025 with a commodity product in a category owned by household names: heavy-duty aluminum foil. Twelve months after launch, the account books over \$100K a month, roughly half of it organic, with advertising held at a 10.5% ACoS while ad sales grew 43% in a single month.

\$101,363 Ordered product sales, August 2026 \$10,190 in August 2025, the launch month	2,331 Units ordered, August 2026 291 units in August 2025	10.47% ACoS, August 2026 10.50% in July; held flat while ad sales rose 43%
5.2% TACoS, August 2026 Ad spend as a share of all sales; 4.6% in July	9.66x Return on ad spend, 2026 year to date \$30,322 spend, \$292,901 ad-attributed sales	26% Catalog revenue from Amazon Business buyers \$174,358 of \$671,009 across the core catalog

This document walks through the starting position, the four decisions that shaped the account, what we actually did month by month, the numbers, what did not go to plan, and what we would carry into your account. We do not guarantee outcomes. We show our work.

How to read the numbers. Monthly totals come from Seller Central sales snapshots for July and August 2026. Advertising figures come from Amazon Ads campaign, targeting, placement, search term, purchased product and budget reports. Three windows are used and each is labelled: 2026 year to date (1 Jan to 14 Sep), the last 90 days (17 Jun to 14 Sep) for the advertising deep dive, and 12 Jul to 14 Sep for search-term analysis. Ad sales use Amazon's 7-day attribution. "Organic and non-attributed" is total ordered product sales minus ad-attributed sales, so it includes halo orders and anything Amazon did not attribute. Year-on-year comparisons are August 2025 against August 2026. Dollar figures are unrounded from the exports unless marked K.

Client and context

The client. A US-registered seller bringing two in-house brands of commercial-grade heavy-duty aluminum foil to Amazon: foodservice roll widths and lengths, sold as single rolls and multi-packs. No prior Amazon sales history to build on. Orders started merchant-fulfilled; the hero listing gained an FBA offer in February 2026.

The buyer. Restaurants, caterers, food trucks, commissary kitchens and bulk-buying households. Many purchase through Amazon Business accounts and order in multiples.

Our scope. Full launch and ongoing account management: catalog structure, listing copy and search-term strategy, image direction, fulfillment planning, Sponsored Products build and weekly optimization, budget pacing, and monthly reporting to the owner.

Marketplace and category. Amazon US, Kitchen & Dining, disposable foodservice supplies.

The challenge

Four things made this a hard launch rather than an easy one.

- **A commodity inside a brand-led category.** Shoppers type "aluminum foil" and see Reynolds, store brands and a wall of near-identical listings. Price alone does not win, and the head term is expensive relative to a \$40 to \$50 order. Today the account ranks sixth on that term with a 3.6% impression share, and that is by design (see Strategy).
- **Zero history.** No reviews, no velocity, no search relevance. Amazon's ranking systems had nothing to work with, so the first weeks had to manufacture relevant traffic without overspending.
- **A launch month that showed the gap.** August 2025 closed at 291 units and \$10,190 in sales at a \$35 average selling price. Advertising through mid-September 2025 delivered roughly 385,000 impressions, 1,825 clicks and \$1,686 in spend across two campaigns.
- **Margin pressure.** Foil is heavy and bulky, so fulfillment costs take a large bite out of a thin gross margin. The advertising plan had to work at a low ACoS from the first month rather than "invest now, fix later".

The brief we set ourselves

Build listings that convert, earn organic rank on the buyer intents where a commercial product actually wins, and keep advertising efficient enough that growth funds itself. Measured as: rising monthly units, a stable ACoS near 10 to 12%, TACoS under 6%, and an organic share of sales that grows rather than shrinks as ad spend rises.

Strategy: four decisions and why we made them

1 Position for the commercial buyer, not the household shopper.

A kitchen buying 500-foot rolls cares about width, gauge, roll length and price per foot. The household shopper cares about brand familiarity. We wrote titles, bullets, backend terms and image copy for the first buyer and let the second come through the long tail. This also decides where ad dollars go: heavy duty, wide, bulk, commercial and dimension-based searches, not the raw head term.

In the data: 52% of ad-attributed sales over the last two months came from search terms containing heavy duty, wide, bulk, commercial, industrial or a roll dimension, at a 10.2% ACoS. Amazon Business buyers now account for 26% of catalog revenue.

2 Build the catalog for shelf space and cross-sell.

In a commodity category, the seller with more relevant offers on page one takes more of the demand. Two brands across roll widths and pack counts give more than one listing a shot at each intent, and a buyer who lands on a 12-inch roll can find the 18-inch or the 4-pack without leaving the storefront.

In the data: over the last 90 days, ads on one listing produced 134 units and \$8,467 in sales on a different listing in the catalog, 6.6% of ad sales. The hero listing carries 68% of catalog revenue; the second brand's four listings carry most of the rest.

3 Prove the product merchant-fulfilled, then move the hero listing to FBA.

Prime eligibility lifts conversion and Buy Box share, and on a heavy item Amazon's inbound rates beat retail carrier rates. We ran merchant-fulfilled through the first months to confirm demand and sell-through, then added an FBA offer in late February 2026 with its own campaign set so it could be bid and budgeted separately.

In the data: year to date, the FBA offer has taken twice the units of the merchant-fulfilled offer on the same listing (6,694 against 3,335) at a 31.3% unit session rate. Featured Offer share sits at 98 to 99%.

4 Advertise for efficiency, not volume.

With thin margins we set a working ACoS target of 10 to 12% and paced budgets to it, accepting some missed impressions rather than buying growth at 25% ACoS. Structure: auto campaigns for discovery and volume, phrase, broad and exact ad groups for harvested winners, a category campaign to hold page-one presence, and a competitor-ASIN campaign to own product-page placements. Search terms reviewed weekly, waste negated, winners graduated.

In the data: 2026 year to date, \$30,322 in spend returned \$292,901 in ad-attributed sales (10.35% ACoS, 9.66x ROAS, 22.2% conversion on 30,342 clicks).

What we considered and rejected. Heavy launch discounting: it trains buyers to a price the margin cannot hold, and with no reviews the listing would not have converted the traffic anyway. Chasing top-of-search on the head term "aluminum foil": the terms we own convert better and cost less, and rank six at 3.6% share is the right place to be for a commercial product in a household category.

Execution: what happened, month by month

Aug 2025	Launch. Listings live for the first roll sizes. Titles, bullets and backend terms built around commercial buyer intent. Two Sponsored Products campaigns started: one auto for discovery, one manual. First month: 291 units, \$10,190.
Sep to Dec 2025	Harvest and build. Weekly search-term reviews moved converting terms into phrase, broad and exact ad groups and negated waste. Category and competitor ad groups added to the manual campaign. Catalog expanded to the second brand and additional widths and pack counts.
Feb 2026	FBA offer and dedicated campaign set. The hero listing gained an FBA offer. A six-campaign portfolio launched for it: auto, broad, phrase, exact, category and competitor-ASIN targeting, each with its own budget so the FBA offer's economics could be read on their own.
Q2 2026	Scale. Monthly sales held above \$75K through the quarter. June closed at \$100.7K, the account's first six-figure month.
Jul 2026	A softer month. Sales eased to \$80,370 on 1,879 units. We held bids and ACoS discipline rather than chasing volume with spend; ACoS finished at 10.50% on \$3,671.
Aug 2026	Recovery and a record. \$101,363 on 2,331 units. Ad sales rose 43% month on month to \$50,089 on \$5,243 in spend at 10.47% ACoS. 8,788 page views, up 383% year on year. Featured Offer share 99.41%.

What did not go to plan

- **Budget caps held back the two auto campaigns.** Year to date they were in budget only 52% and 72% of the time, and Amazon estimates \$71K to \$214K in missed sales across the pair. Part of that was deliberate pacing against inventory and cash. Part of it, in hindsight, was too conservative once ACoS had proven stable under 12%. Budget, not structure, is the next lever on this account.
- **Product-page placements ran hot in the auto campaigns.** 15.2% ACoS at an 11.9% conversion rate, against 9.2% to 9.6% on search placements. We tightened auto bids, applied placement modifiers, and moved product-page work into the competitor-ASIN campaign, which now runs at a 5.5% ACoS.
- **Non-converting search terms.** Over the last two months, 1,265 of 1,881 search terms produced clicks and no orders: \$1,996, or 20% of search spend. That is inside the normal range for a large auto footprint, and it is exactly what the weekly negative routine is for, but it never reaches zero on an account this size.

Results

Launch month against the same month one year later

Seller Central	August 2025	August 2026	Change
Ordered product sales	\$10,190	\$101,363	+895%
Units ordered	291	2,331	+701%
Average selling price	\$35	\$43	+24%
Page views	approx. 1,800	8,788	+383%
Featured Offer share	approx. 97.4%	99.41%	+197 bps

August 2026 as a multiple of August 2025. Page views and Featured Offer share for August 2025 are back-calculated from Amazon's year-on-year deltas; all other figures are direct from Seller Central.

Paid and organic, side by side

Ordered product sales split into ad-attributed (7-day) and everything else, July and August 2026. Spend rose 43% and organic sales still grew 13%. That is the pattern we want: advertising feeding rank, not replacing it.

The two most recent full months

	July 2026	August 2026	Change
Ordered product sales	\$80,370	\$101,363	+26%
Units ordered	1,879	2,331	+24%
Average sales per order item	\$51.68	\$51.74	flat
Ad spend	\$3,671	\$5,243	+43%
Ad-attributed sales	\$34,982	\$50,089	+43%
Ad-attributed orders	709	1,051	+48%
ACoS	10.50%	10.47%	flat
TACoS (ad spend / total sales)	4.57%	5.17%	+0.6 pts
Organic and non-attributed sales	\$45,388	\$51,274	+13%
Blended ROAS (total sales / ad spend)	21.9x	19.3x	

Advertising, 2026 year to date (1 Jan to 14 Sep)

18x

Ad spend against the same window a year
earlier
\$1,686 in Aug to mid-Sep 2025

Catalog conversion, 2026 year to date

Business Report, core foil catalog (7 listings)	Value
Ordered product sales	\$671,009
Of which Amazon Business (B2B)	\$174,358 (26%)
Units ordered / order items	16,997 / 14,403
Hero listing, FBA offer: unit session percentage	31.3%
Hero listing, merchant-fulfilled offer: unit session percentage	15.6%
Hero listing, Featured Offer share	98.2%
Second brand, two lead listings: unit session percentage	23.8% and 27.5%

Unit session percentage is units ordered divided by listing sessions; multi-unit and B2B orders push it above a pure order conversion rate. The same measure applies to every listing, so the FBA against merchant-fulfilled comparison holds.

Advertising deep dive, last 90 days (17 Jun to 14 Sep 2026)

\$13,570 in spend returned \$127,446 in ad-attributed sales and 2,701 orders from 12,789 clicks: 10.6% ACoS, 21.1% conversion, \$1.06 average CPC. Campaign figures below are 2026 year to date.

Campaign architecture

Campaign	Role	YTD spend	YTD ad sales	ACoS
Catalog auto	Discovery and volume across the second brand's four listings	\$9,381	\$71,886	13.1%
Catalog manual	Phrase, broad, exact, category and competitor ad groups	\$7,282	\$79,694	9.1%
Hero FBA auto	Discovery for the FBA offer	\$11,000	\$102,108	10.8%
Hero FBA category	Page-one presence in the foil category	\$1,502	\$21,980	6.8%
Hero FBA broad	Harvested long-tail terms	\$965	\$14,365	6.7%
Hero FBA competitor ASIN	Product-page placements on rival listings	\$126	\$2,269	5.5%
Hero FBA phrase and exact	Precision terms, low volume	\$66	\$598	11.0%
Total, 2026 year to date		\$30,322	\$292,901	10.35%

Where the sales come from

Ad sales by targeting type, last 90 days. Auto is the engine at 71% of ad sales; phrase is the most efficient at 7.2% ACoS.

Where the ads show

Top of search earns its premium: 46% of ad sales at a 30.8% conversion rate. Product pages are the placement to watch.

Search-term hygiene (12 Jul to 14 Sep 2026)

- 1,881 distinct search terms, 616 of them converting; 80% of search spend landed on terms that produced at least one order. The top 20 terms produced 46% of ad sales.
- Product-targeted traffic (auto placements on rival listings) delivered 22% of ad sales at 12.4% ACoS. Competitor brand-name searches delivered \$3,628 at 12.8% ACoS; we keep those but do not bid them up.
- On searches for the client's own listings the account holds rank one with a 40.7% impression share, which keeps rivals off the brand's own traffic.

Lessons, and what carries into your account

What worked

- **Own the buyer intent, not the head term.** Commercial and dimension-led searches convert better and cost less than the generic term, and they compound into organic rank where it matters.
- **Auto as the engine, manual as the margin.** Auto campaigns brought 71% of ad sales; harvested phrase and broad groups ran at 7% to 10% ACoS and held the blend near 10%.
- **Pay for top of search.** A \$1.39 CPC there bought a 30.8% conversion rate and a 9.6% ACoS. Cheaper placements were not cheaper per order.
- **FBA on the hero listing, once earned.** Twice the units of the merchant-fulfilled offer on the same page, with Buy Box share above 98%.
- **Hold ACoS through a soft month.** July dipped; we did not buy our way out. August recovered with organic sales up 13%.

What we would do differently

- Lift auto budgets earlier. Once ACoS had held under 12% for two months running, the missed-impression data said spend more, and we waited longer than we should have.
- Move product-page work into ASIN targeting from the start rather than letting the auto campaigns learn it the expensive way.
- Split the second brand's catalog campaigns by listing sooner, so each roll size is budgeted on its own economics the way the hero listing now is.

Next on this account

- Raise the two auto budgets in step with inventory cover, targeting 90%+ time in budget.
- Amazon Business quantity-discount tiers on the hero listing to lift the 26% B2B share.
- Sponsored Brands and Sponsored Display to defend the storefront and re-engage commercial buyers who purchased once.

If your product looks like this one

This playbook transfers to consumables and commodity products where a household brand owns the head term, to catalogs with a B2B buyer, to heavy or bulky items where fulfilment cost decides the margin, and to any launch that has to fund itself from month one. It relies on three things we bring to every account: listing copy written for a specific buyer, a campaign structure clear enough to make decisions from, and the discipline to hold an ACoS target when it would be easier to spend.

Working with Ecommerce Business Solutions

We are a senior-led Amazon growth agency: the person who builds your account plan is the person who runs it, and every recommendation comes with the number it is meant to move and the reasoning behind it. We manage Sponsored Ads, listing SEO and A+ Content, launches, catalog and account operations, and the monthly reporting that keeps an owner in control. We do not guarantee sales or rankings, and we will tell you when the data says no. To see how this applies to your catalog, send us your last 90 days of Business Report and advertising exports and we will return a written audit with a plan of action, risks included.
